## White Box Testing

### WithdrawMoneyTest:

The screenshot displays an IDE with the `WithdrawMoneyTest` class and its test results. The class is a JUnit 5 test class for the `WithdrawMoney` class. It includes several test methods and a `setUp` method. The test results show that the tests passed, with a total of 13 runs, 13 errors, and 0 failures. The coverage table at the bottom shows the following data:

Element	Coverage	Covered Comp...	Missed Compl...	Total Complex...
Banking-System-in-Core-Java-master	2.1 %	11	502	513
Banking-System-in-Core-Java-master	2.1 %	11	502	513
(default package)	2.1 %	11	502	513
WithdrawMoneyTest.java	15.8 %	3	16	19
WithdrawMoney.java	21.1 %	8	30	38

## ViewOneTest :

The screenshot displays the ViewOneTest class in an IDE. The class includes a private ViewOne instance and several test methods. The test results pane on the left shows 8 runs, 0 errors, and 6 failures. The failure trace indicates that the testPopulateArrayWithRecords method failed due to an assertion error. The coverage pane at the bottom shows that the ViewOneTest.java file has 100% coverage.

```
7
8 public class ViewOneTest {
9
10     private ViewOne viewOne;
11
12     @BeforeEach
13     public void setUp() {
14         // Initialize ViewOne before each test
15         viewOne = new ViewOne();
16     }
17
18     // Test if the ViewOne window is correctly initialized and visible
19     @Test
20     public void testWindowInitialization() {
21         // Check if the window is visible
22         assertTrue(viewOne.isVisible());
23
24         // Check window size
25         assertEquals(350, viewOne.getWidth());
26         assertEquals(235, viewOne.getHeight());
27     }
28
29     // Test if the record array is populated correctly from the file
30     @Test
31     public void testPopulateArrayWithRecords() throws IOException {
32         // Create a dummy file with records
33         try (FileOutputStream fos = new FileOutputStream("Bank.dat");
34              DataOutputStream dos = new DataOutputStream(fos)) {
35             dos.writeUTF("12345");
36             dos.writeUTF("John Doe");
37             dos.writeUTF("January");
38         }
39     }
40 }
```

## ViewCustomerTest:

The screenshot displays the ViewCustomerTest class in an IDE. The class includes a private ViewCustomer instance and several test methods. The test results pane on the left shows 8 runs, 0 errors, and 4 failures. The failure trace indicates that the testPopulateArrayWithRecords method failed due to an assertion error. The coverage pane at the bottom shows that the ViewCustomerTest.java file has 100% coverage.

```
9
10 public class ViewCustomerTest {
11
12     private ViewCustomer viewCustomer;

## FindAccountNameTest:

The screenshot displays the FindAccountNameTest class in an IDE. The class includes a tearDown method to clean up test data and two test methods: testFindAccountNameSuccessful and testFindAccountNameNotFound. The testFindAccountNameSuccessful method simulates a user entering "John Doe" and clicking the "Find" button, then verifies the account details. The testFindAccountNameNotFound method simulates a user entering "Non Existent" and clicking the "Find" button, then verifies that an error message is shown.

```
44 public void tearDown() {
45     // Clean up the test data file after tests
46     if (dataFile.exists()) {
47         dataFile.delete();
48     }
49 }
50
51 @Test
52 public void testFindAccountNameSuccessful() {
53     // Simulate user entering the name "John Doe" into the txtName field
54     findAccountName.txtName.setText("John Doe");
55
56     // Simulate clicking the "Find" button
57     findAccountName.btnFind.doClick();
58
59     // Verify that the correct account details are displayed for "John Doe"
60     assertEquals("1", findAccountName.txtNo.getText());
61     assertEquals("John Doe", findAccountName.txtName.getText());
62     assertEquals("2024-12-01, 2024-12-05, 2024-12-10", findAccountName.txtDate.getText());
63     assertEquals("5000.00", findAccountName.txtBal.getText());
64 }
65
66 @Test
67 public void testFindAccountNameNotFound() {
68     // Simulate user entering a non-existent name into the txtName field
69     findAccountName.txtName.setText("Non Existent");
70
71     // Simulate clicking the "Find" button
72     findAccountName.btnFind.doClick();
73
74     // Verify that an appropriate error message is shown (assuming JOptionPane is shown)
```

The coverage report for FindAccountNameTest (11-Dec-2024 9:38:51 pm) is as follows:

Element	Coverage	Covered Comp...	Missed Compl...	Total Complex...
Banking-System-in-Core-Java-master	4.3 %	22	491	513
Banking-System-in-Core-Java-master	4.3 %	22	491	513

FindAccountName.java	80.0 %	12	3	15

## FindAccountTest:

The screenshot displays the FindAccountTest class in an IDE. The class includes a setUp method to create a new instance of FindAccount and a test method testPopulateArray that simulates loading records into the array. The testPopulateArray method uses assertEquals to verify the records.

```
8 public class FindAccountTest {
9
10     private FindAccount findAccount;
11
12     @BeforeEach
13     public void setUp() {
14         // Create a new instance of FindAccount before each test
15         findAccount = new FindAccount();
16
17         // Mock some initial records directly for testing purposes
18         findAccount.records[0][0] = "1";
19         findAccount.records[0][1] = "John Doe";
20         findAccount.records[0][2] = "01";
21         findAccount.records[0][3] = "Jan";
22         findAccount.records[0][4] = "2024";
23         findAccount.records[0][5] = "1000";
24
25         findAccount.total = 1; // Set total rows
26     }
27
28     // Test for the populateArray() method
29     @Test
30     public void testPopulateArray() throws IOException {
31         // Here, we simulate loading records into the array.
32         findAccount.records[0][0] = "1";
33         findAccount.records[0][1] = "John Doe";
34         findAccount.records[0][2] = "01";
35         findAccount.records[0][3] = "Jan";
36         findAccount.records[0][4] = "2024";
37         findAccount.records[0][5] = "1000";
38     }
39 }
```

The coverage report for FindAccountTest (11-Dec-2024 9:37:58 pm) is as follows:

## DepositMoneyTest:

The screenshot shows an IDE with the `DepositMoneyTest` class open. The class is a JUnit 5 test for the `DepositMoney` class. It includes a `@Test` method `testEditRecUpdatesRecord()` that prepares test data, sets up the `DepositMoney` object, calls `editRec()`, and validates the updated record. The IDE also shows a coverage report for the `DepositMoneyTest` class.

```
15 depositMoney = new DepositMoney();
16 }
17
18 @Test
19 public void testEditRecUpdatesRecord() {
20     // Prepare test data
21     String[][] testRecords = {
22         {"101", "John Doe", "January", "1", "2000", "500"},
23         {"102", "Jane Doe", "February", "15", "2005", "300"}
24     };
25
26
27
28     depositMoney.records = testRecords;
29     depositMoney.total = 2;
30     depositMoney.recCount = 0;
31     depositMoney.curr = 500;
32
33     depositMoney.txtNo.setText("101");
34     depositMoney.txtName.setText("John Doe");
35     depositMoney.cboMonth.setSelectedItem("March");
36     depositMoney.cboDay.setSelectedItem("10");
37     depositMoney.cboYear.setSelectedItem("2010");
38     depositMoney.txtDeposit.setText("200");
39
40     // Call editRec
41     depositMoney.editRec();
42
43     // Validate the record has been updated
44     String[] updatedRecord = depositMoney.records[0];
45     assertEquals("101", updatedRecord[0]);
46 }
```
